# Characteristics of SI Support Units

The Support Units of SI Machinery are standardized in order to firmly support and fasten a ball screw for transmitting linear motion very precisely.

## Features

### Simplicity of Design and Assembly

The design is very effective for use due to its standardization. Rigid angular contact bearings in a fixed part are combined with an optimized pre-load, so it can improve precision of liner motion of a ball screw easily without additional assembly or operation. Moreover, the standardized product ensures superior compatibility.

### High Precision

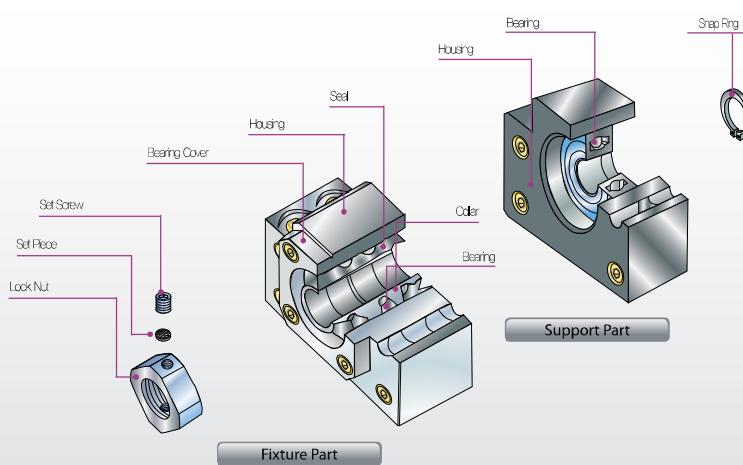

Angular contact ball bearings in the fixed parts are precisely assembled in face-to-face combination. Because it is designed in a structure to absorb the parallel error between shaft and guide, it has minimized the effect of assembly error and can maintain precise concentricity of the shaft.

### Dust-Proof Effect

The support unit is framed with oil seal to prevent the influx of fine dusts or foreign substances and thus enhances operation precision. Furthermore, it allows longtime use as grease leakage is prevented by minimizing the tolerance between the oil seal and the rotation shaft.

## Structure

In the fixed part of support unit, highly rigid angular contact ball bearings are assembled in face-to-face combination, which is appropriate to the dynamic characteristic of the rotational shaft or screw. In addition, it can achieve highly accurate rotational or linear motion due to precisely controlled pre-load in assembly process. The angular contact bearings are filled with the appropriate volume of high quality grease, and Oil seal is framed in the fixed part to prevent fine dusts and the grease from leaking. Deep groove ball bearing is used for the simple support part of support unit.

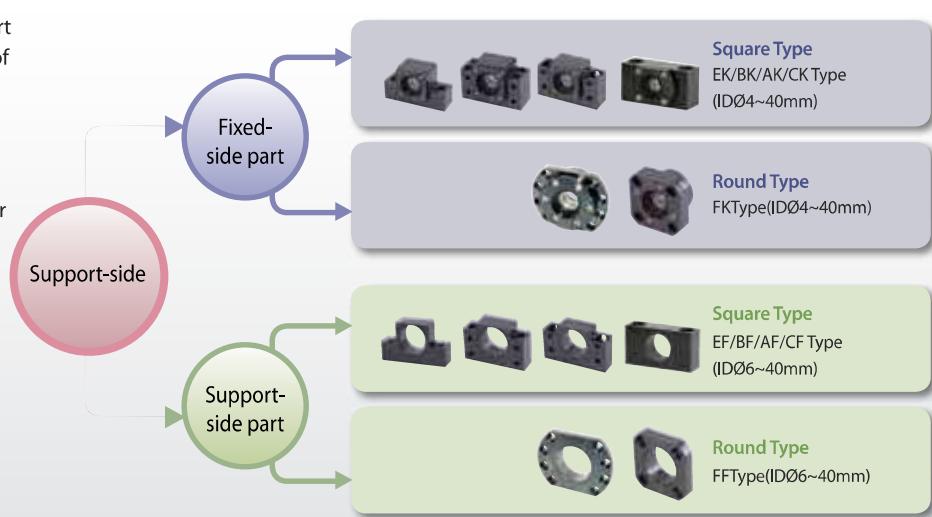

## Shape and Classification

There are 2 different types of support units for installation and condition of use.

One is the square type that fixes the unit on base surface and another is the round type to fix in a hole.

Depending on the position of power transmission shaft, the fixed-side(motor) support unit and support-side support unit can be selected.

# Characteristics of SI Support Units

## How to Order

### The Fixed Side

**BK10**

Model No. of the Fixed-side  
(EK, BK, AK, FK)

**P5**

Grade: High Precision

**C8**

Grade: Intermediate Pre-load

**P0-C7**

Grade: Light Pre-load

- P5 (High Precision type): assembled with P5 bearing
- C8 (Intermediate Pre-load): assembled with preload type bearing
- P0-C7 (Light Pre-load): No clearance due to use of P0 bearing and assembled with C7 pre-load type bearing (Registration of the utility model: 20-0271941)

### The Supported Side

**BF10**

Model No. of the Supported-side(EF, BF, AF, FF)

Please, note that the type names and numbers for the supported-side support unit (EF, BF, AF, FF (No. 8, 10, 12)) are not the same as the inner diameter of bearing used in the corresponding product. (Please, refer to page 71, 73, 75, 77)

TYPE name and number ≠ Inner diameter of bearing (EF, BF, AF, FF8=ø6, EF, BF, AF, FF12=ø10)

## Support Unit Characteristic Chart

| Model No.                        | Bearing Type                   |           |        | Axial Direction                |                               |
|----------------------------------|--------------------------------|-----------|--------|--------------------------------|-------------------------------|

## Bearing Combination

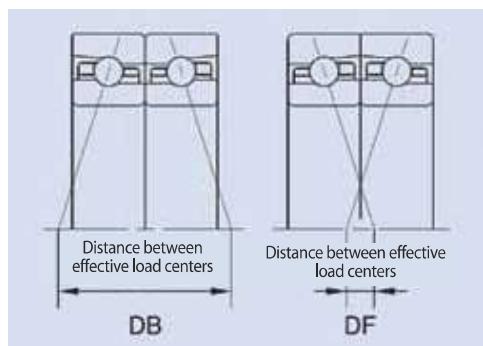

There are DB combination and DF combination in combination methods of angular bearing. SI Support Unit uses DF combination.

### DB Combination

- The distance between effective load centers is long. So the stiffness is big when there is moment load. It gets flaking damage easily because of increase in internal load when there is misalignment.

### DF Combination

- The distance between effective load centers is short. So the stiffness is low when there is moment load. Its absorbability of assembly error is superior so it is used normally for bearing combination.

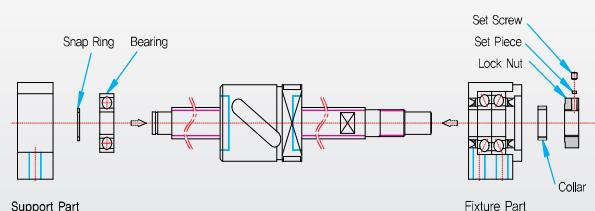

# Characteristics of SI Support Units

## Mounting Procedure

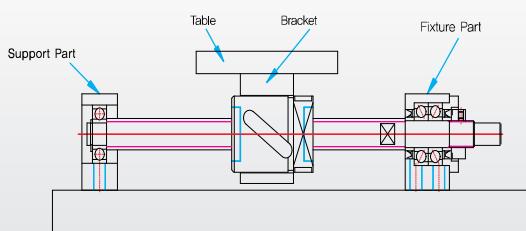

### 1. Installing the Support Unit

- 1) Connect the fixed-side part with ball screw shaft
  - Do not disassemble the support unit as its preload has already been adjusted
  - Take care not to let the oil seal lip turn outward when ball screw is inserted into the unit.
- 2) After inserting the ball screw into the unit, put the collar and secure the locknut by fastening the set piece and setscrew.
  - Adhesive can be used to prevent the locknut from being loosened.
- 3) Mount the nut bracket on ball screw.
- 4) After connecting the ball bearing for supportive part to the ball screw shaft, fix the snap ring and mount the bearing onto the housing.

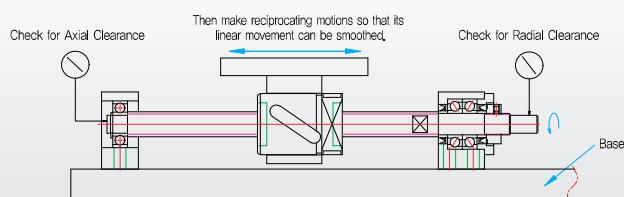

### 2. Installation onto Table and Base

- 1) Fasten a table with the nut bracket of ball screw.
- 2) Pre-assemble the fixed-side support unit with base as designed
  - If using the fixed side Support Unit as the reference point, provide a clearance between the ball screw nut and the table or inside the bracket when making adjustment.
  - If using the table as the reference point, make the adjustment either by using the shim (for a square type Support Unit), or providing the clearance between the outer surface of the nut and the inner surface of the mounting section (for a round type Support Unit)
- 3) Assemble the housing of support-side support unit with ball screw and then pre-assemble the unit with base as designed.

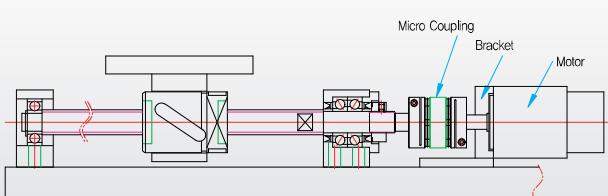

### 3. Checking the accuracy and Fully Mounting the Support Unit

- 1) Move the table assembled to the ball screw toward the center of the shaft in order to make it concentric. Make back-and-forth motion so that its linear movement can be smooth.
- 2) Measure the axial clearance of the shaft and the run-out at the end of the shaft of the ball screw with a dial gauge. Fully fasten in the order of nut bracket and table, the fixed-side unit, and then the support-side unit.

### 4. Connection with Motor

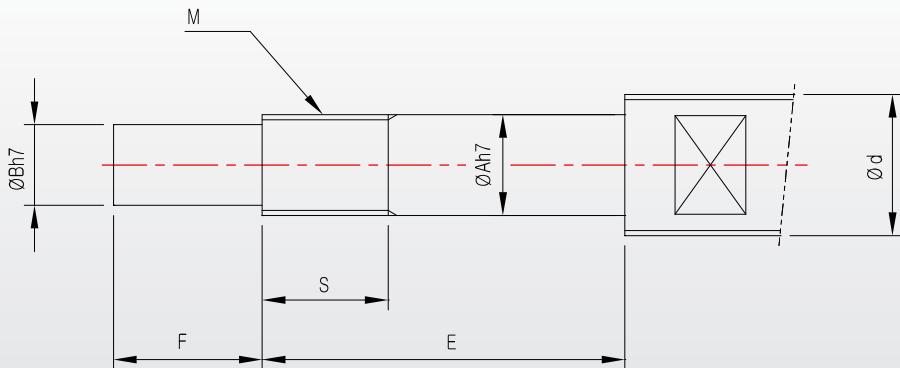

- 1) Precisely connect the bracket installed on the motor to the base by matching it to the shaft center of the ball screw.
- 2) Connect the motor and the ball screw by using a Sung-il coupling
  - Careful attention is necessary during assembly as the assembly condition of the motor bracket and the coupling affects the positioning of table.
- 3) Check the precision of the shaft center by conducting enough test operation while driving the motor at slow speed.

# EK Type Support Unit

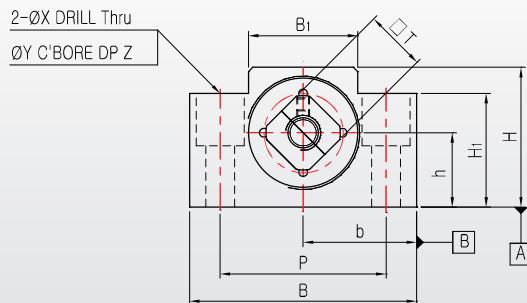

## Square Type for Fixture

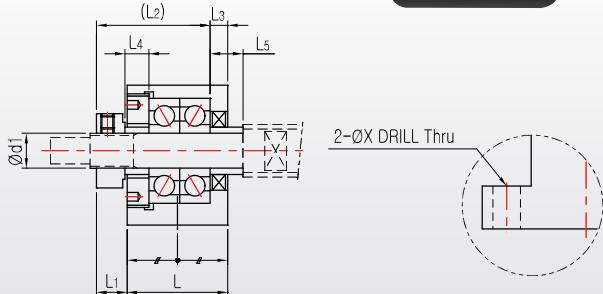

**RoHS** COMPLIANT **REACH** The new EU chemical legislation

Please, download CAD DATA from [www.sungilfa.com](http://www.sungilfa.com)

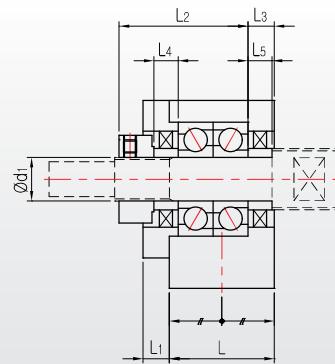

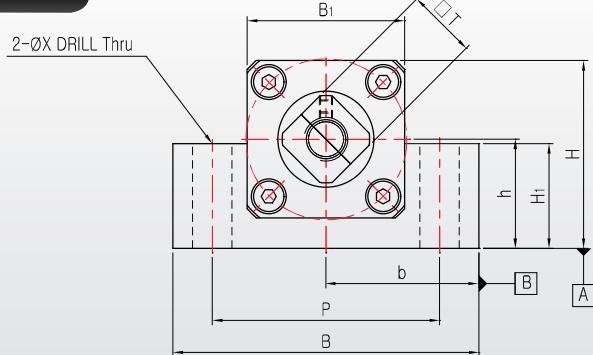

**EK 6~8**

**EK 4, 5**

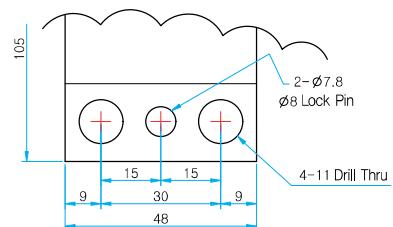

**EK 10~20**

### Note

- The surfaces A and B are reference for installation. Please, use the accurate size spacer if adjusting height is necessary.
- Do not disassemble the support unit since the preload of the bearing has already been adjusted.
- Appropriate amount of grease is filled in the bearing of fixed-side support unit.
- Radial ball bearing is in EK-4 and EK-5 and it is suitable for use on portions where axial load is small.
- Please refer to page 66 about bearing type and characteristic according to Support Unit grade
- Please refer to page 86 for fastening torque of the lock nut.

**AK 8 ~ 20**

Remark (1) : AK 20 has no drilled hole at the annotated position

### Note

1. The surfaces A and B are reference for installation. Please, use the accurate size spacer if adjusting height is necessary.
2. Do not disassemble the support unit since the preload of the bearing has already been adjusted.
3. Appropriate amount of grease is filled in the bearing of fixed-side support unit.
4. Please refer to page 66 about bearing type and characteristic according to Support Unit grade
5. Please refer to page 86 for fastening torque of the lock nut.

## Note

- The surfaces A and B are reference for installation. Please, use the accurate size spacer if adjusting height is necessary.
- Do not disassemble the support unit since the preload of the bearing has already been adjusted.
- Appropriate amount of grease is filled in the bearing of fixed-side support unit.
- Please refer to page 64 about bearing type and characteristic according to Support Unit grade
- Please refer to page 82 for fastening torque of the lock nut.

# WBK type Support Unit

## Miniature Type

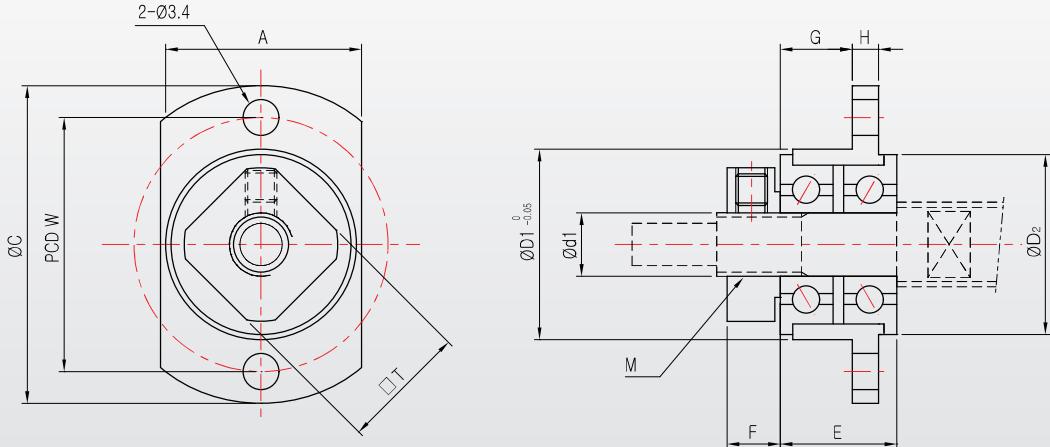

**RoHS** COMPLIANT **REACH** The new EU chemicals legislation

Please, download CAD DATA from [www.sungilfa.com](http://www.sungilfa.com)

### WBK TYPE Miniature Support Unit

- Support unit can be applied when precision miniature ball screw is used.

### Note

- Tighten locknut as flange type miniature ball bearing can be slightly detached from surface due to vibration during operation.
- To prevent the collar which is inserted from slipping out, fasten it with a bolt when release

## Dimension and performance

| Model no.  | d <sub>1</sub> | L  | H  | F  | E  | D  | A   | P.C.D | B   | L <sub>1</sub> | X  | Y    | Z  |
|------------|----------------|----|----|----|----|----|-----|-------|-----|----------------|----|------|----|
| SWBK25 DF  | 25             | 51 | 18 | 33 | 68 | 85 | 130 | 110   | 100 | 15             | 11 | 17.5 | 11 |
| SWBK25 DFD | 25             | 66 | 18 | 48 | 83 | 85 | 130 | 110   | 100 | 15             | 11 | 17.5 | 11 |
| SWBK30 DF  | 30             | 51 | 18 | 33 | 68 | 85 | 130 | 110   | 100 | 15             | 11 | 17.5 | 11 |
| SWBK30 DFD | 30             | 66 | 18 | 48 | 83 | 85 | 130 | 110   | 100 | 15             | 11 | 17.5 | 11 |
| SWBK35 DF  | 35             | 51 | 18 | 33 | 68 | 95 | 142 | 121   | 106 | 15             | 11 | 17.5 | 11 |
| SWBK35 DFD | 35             | 66 | 18 | 48 | 83 | 95 | 142 | 121   | 106 | 15             | 11 | 17.5 | 11 |
| SWBK35 DFF | 35             | 66 | 18 | 48 | 98 | 95 | 142 | 121   | 106 | 30             | 11 | 17.5 | 11 |
| SWBK40 DF  | 40             | 51 | 18 | 33 | 68 | 95 | 142 | 121   | 106 | 15             | 11 | 17.5 | 11 |
| SWBK40 DFD | 40             | 66 | 18 | 48 | 83 | 95 | 142 | 121   | 106 | 15             | 11 | 17.5 | 11 |

## Bearing type and performance

| Model no.  | Bearing type | Basic dynamic rated load (Kgf) | Static permissible load (Kgf) | Pre-load (Kgf) | Axial stiffness (kgf/ $\mu$ m) | Starting torque (kgf · m) |
|------------|--------------|--------------------------------|-------------------------------|----------------|--------------------------------|---------------------------|
| SWBK25 DF  | 25TAC 62B    | 2910                           | 4150                          | 320            | 100                            | 2                         |
| SWBK25 DFD | 25TAC 62B    | 4700                           | 8300                          | 440            | 150                            | 3                         |
| SWBK30 DF  | 30TAC 62B    | 2980                           | 4400                          | 340            | 105                            | 2.5                       |
| SWBK30 DFD | 30TAC 62B    | 4850                           | 8800                          | 360            | 155                            | 3                         |
| SWBK35 DF  | 35TAC 72B    | 3150                           | 5100                          | 390            | 120                            | 3                         |
| SWBK35 DFD | 35TAC 72B    | 5150                           | 10200                         | 530            | 175                            | 4                         |
| SWBK35 DFF | 35TAC 72B    | 5150                           | 10200                         | 780            | 240                            | 5.5                       |
| SWBK40 DF  | 40TAC 72B    | 3250                           | 5300                          | 400            | 125                            | 3                         |
| SWBK40 DFD | 40TAC 72B    | 5250                           | 10600                         | 540            | 185                            | 4                         |
| SWBK40 DFF | 40TAC 72B    | 5250                           | 10600                         | 800            | 245                            | 5.5                       |
